The management of the school stood reciting his speech in a majestic voice, saying:

- Dear students!.. I announce the opening of the **Abadilah Competition** to determine the most clever and cultured students among the students of our dear school.. The participation will be from a group of four students who will cooperate to succeed and win the amazing award and the brilliant honor!

In the break, Abdullah smiled, saying: 'This is a test for you, my friends; Who are the Abadilah?'

Saa'eed replied: The Abadilah are four of the companions of the Messenger of Allah. They saw the Messenger of Allah, may Allah's prayers and peace be upon him, when they were young, and they gathered knowledge and became beacons of guidance.. Does anyone know what the names of these honorable people are?

Abdu-Allah the son of Omar

Abdu-Allah the son of Abbas

Abdu-Allah the son of Amr

Abdu-Allah the son Al-Zubayr

Ahmed replied: Is it possible that we do not know them?! ..  
They are:

1- Abdullah bin (the son of) Omar bin Al-Khattab, Commander of the Faithfuls, the martyr, may Allah be pleased with them both.

2- Abdullah bin Al-Abbas, the uncle of the Messenger of Allah, may Allah be pleased with them both.

3- Abdullah bin Al-Zubayr, the disciple of the Messenger of Allah, may Allah be pleased with them both.

4- Abdullah bin Amr bin Al-A'as, the conqueror of Egypt, may Allah be pleased with them both.

Ammar continued: "And they were called 'Abadilah' because they all bear the name 'Abdullah'!"

The four clapped their hands together laughing and Abdullah shouted: "We are ready for this, **Allah willing**. May we obtain the surname of this honorable people, feel the joy of knowledge, the pleasure of knowledge and the sweetness of victory!"

Indeed, the four received the competition box from the director after they registered their names in the competition. The box contained a paper explaining the laws of the competition, and a map showing the first question, which is: How many elements are there in the universe?

Ahmed said: "It is a question in chemistry, and it is easy. There are 118 natural and synthetic elements... So the first place on the map is the laboratory!"

Ammar replied: "Good note, Ahmed, but I do not agree with you that it is just a simple question, our answer must be accurate, clear and distinct in order for us to win!"

Indeed, the four sat in the library and searched for the appropriate information, and cooperated in writing a sufficient and satisfactory answer on a clean sheet of paper with Saeed's beautiful handwriting, and presented it to the chemistry professor in the laboratory, who read it easily and smiled, giving them the paper of the second question, saying: "This is the best answer, but it is not the first one I have received. You should hurry!"

Indeed, the friends added speed to the accuracy and clarity, and began to pass the questions one after the other and move on the map from one station to another, racing with other groups in a sporty spirit, but the questions were getting more difficult, so the competitors began to be defeated in front of them one after the other, but the cooperation of our friends, their trust in **Allah**, their good planning and deliberation , all of this had the greatest role in their persistence despite all the difficulties in all subjects, and they deservedly won the admiration of their teachers!

Finally, the friends reached the last station, where they handed the answer to the director, but how much their hearts beat before the director smiled and announced his acceptance of the answer, so the smile jumped on their faces and the joy flew from their eyes, then within seconds the director gave them a small box that Ammar had received and opened it while their eyes stared at its small contents, it was golden in color. It's a key!

**Got it!, perhaps we  
can find the place  
of the treasure  
under the inlay  
of the bow!**

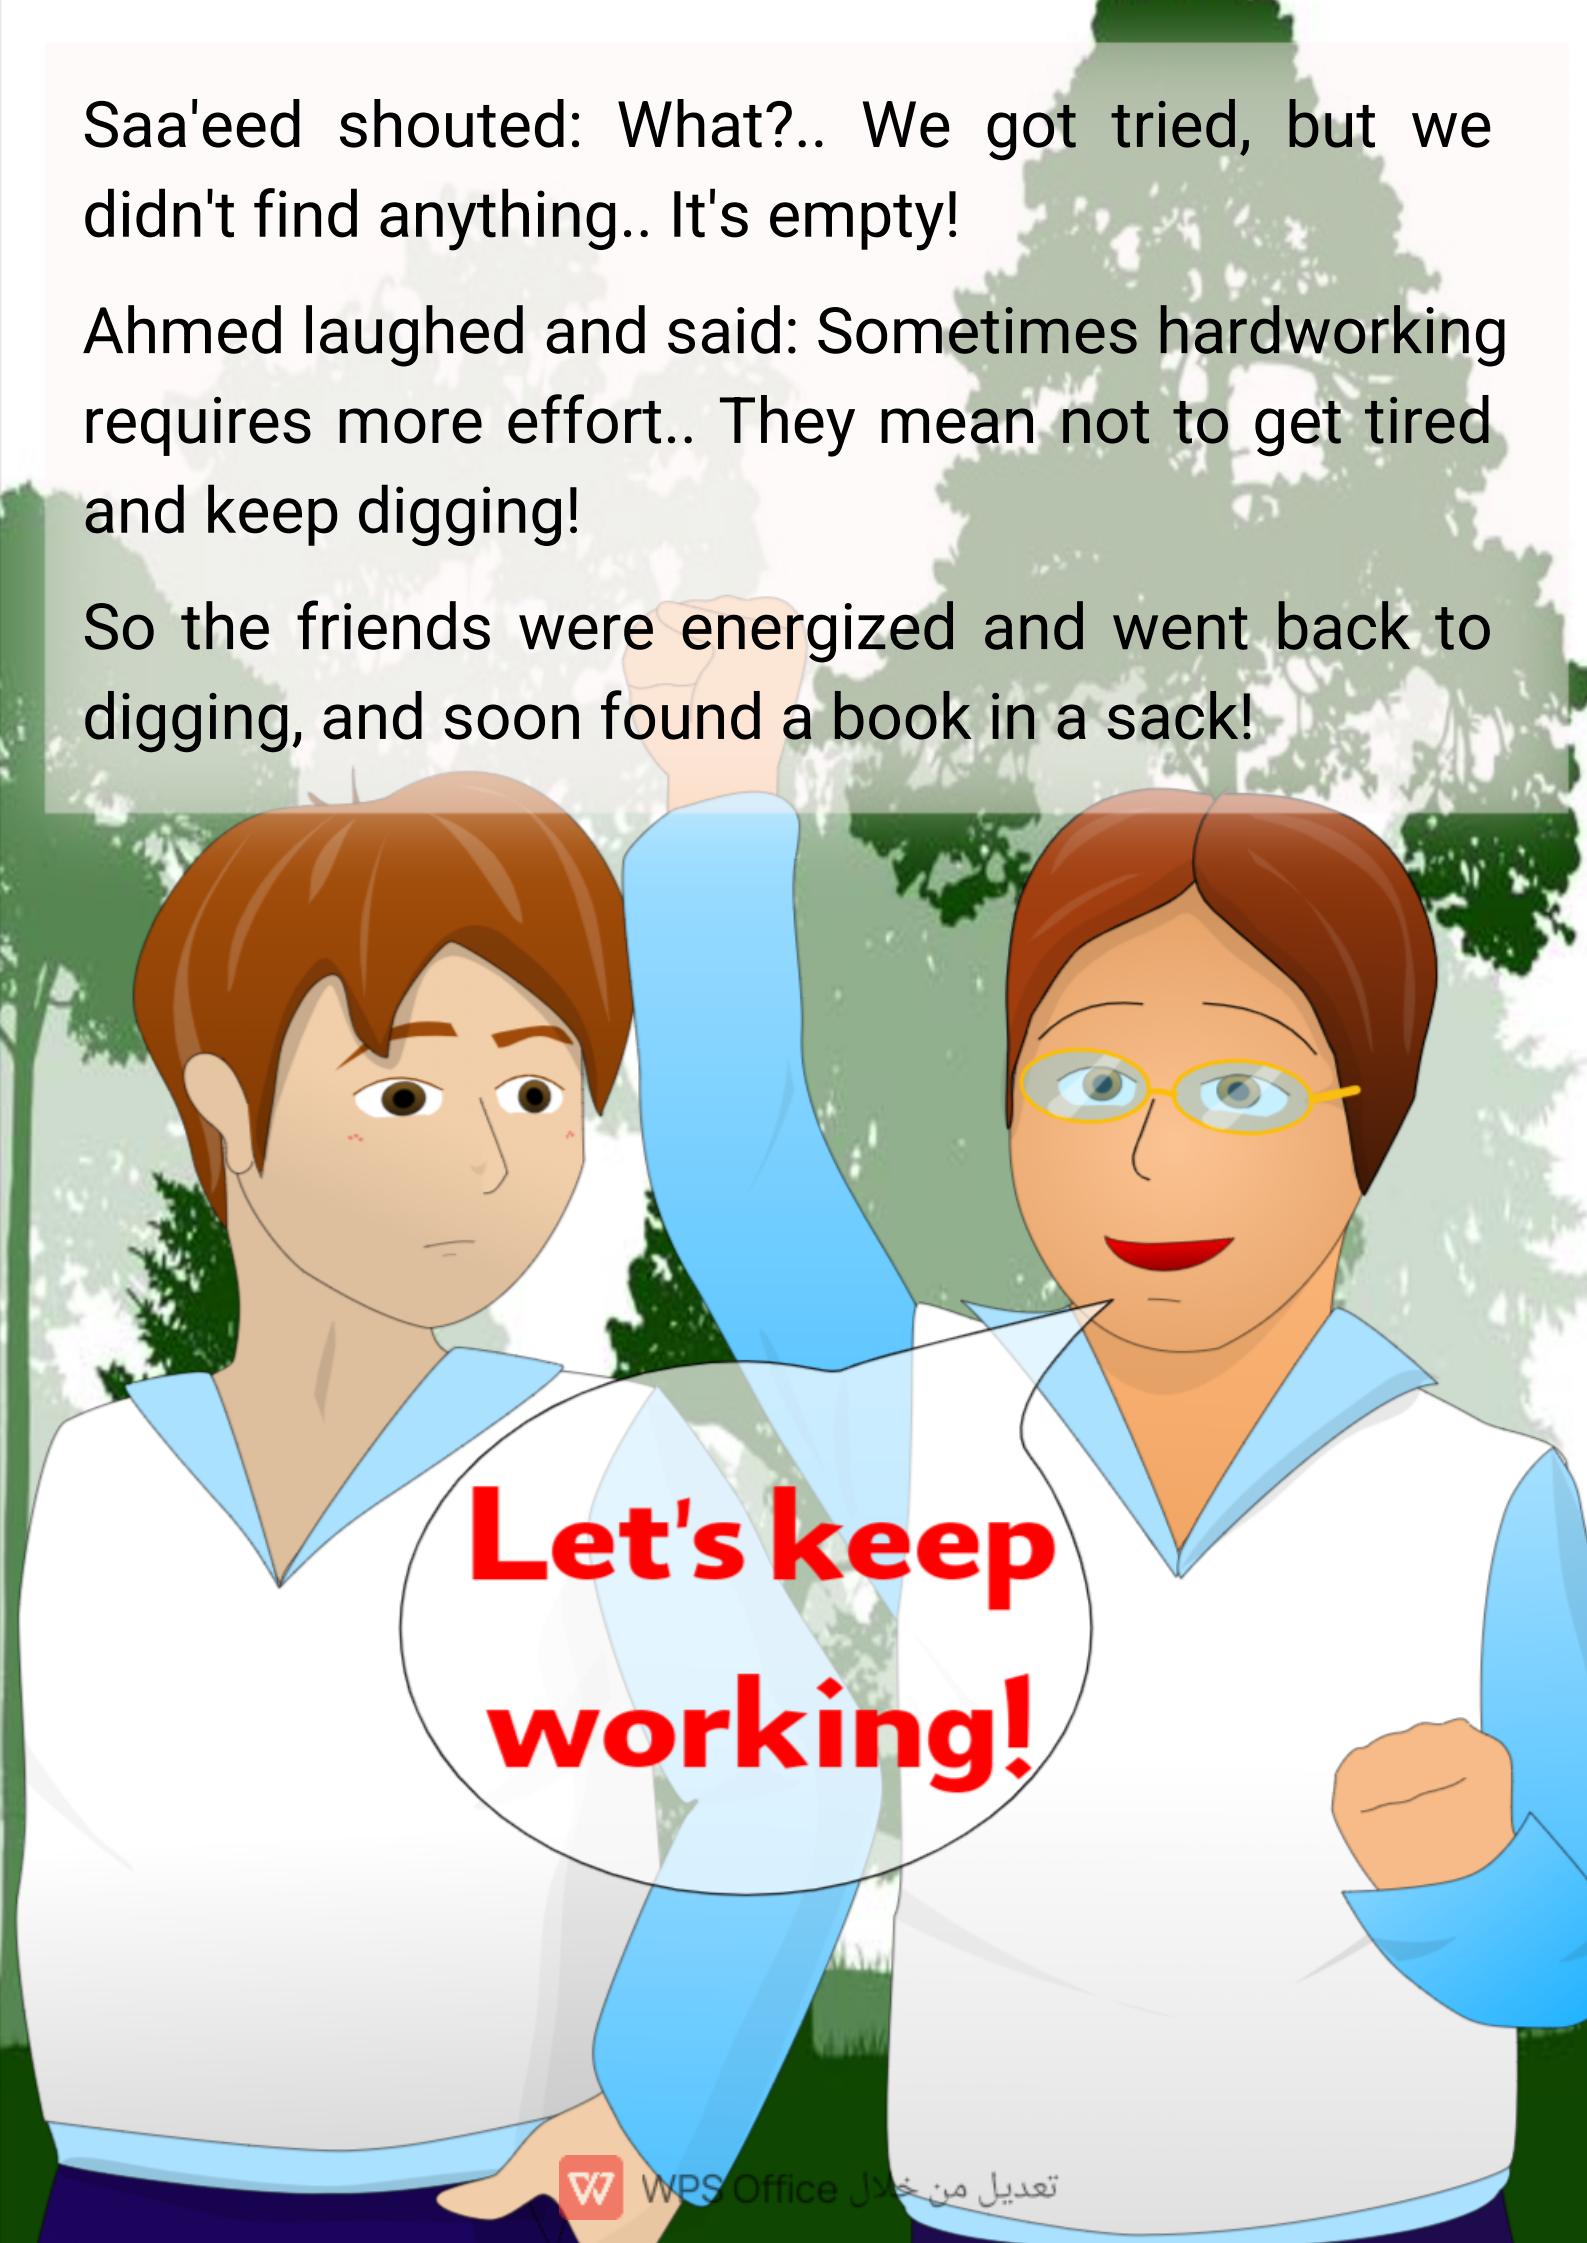

The friends went to the sign of the arrow on the map, so they walked the aforementioned steps in the garden next to the school, with digging tools in their hands, and suddenly Saeed, looking at the map, shouted: "Dig with the name of Allah!" So everyone started digging with a smile on their faces. Indeed, they found a small box, they hurried to open it by the key, but it was empty except for the inscription "Whoevere is hard-working finds [the benefit of his tired]!"

Saa'eed shouted: What?.. We got tried, but we didn't find anything.. It's empty!

Ahmed laughed and said: Sometimes hardworking requires more effort.. They mean not to get tired and keep digging!

So the friends were energized and went back to digging, and soon found a book in a sack!

**Let's keep  
working!**

So the friends extracted it and turned its pages, but they did not find anything exciting, so they were disappointed, but Saa'eed suddenly said:

- Wait!.. I got it, person gets tired and strives until he reaches knowledge.. but knowledge is not enough.. the learner should work and strive a lot until he reaches his dream and desire!

The friends rejoiced at this hope and went back to digging!

Within minutes, dirt was uncovered from a box, so the friends hurried to open it, and they found... In it, they found four shiny 🏅 medals of gold, which are very beautiful, and a paper written on it: 'Smile for the camera!' They turned around and saw a camera watching them!.. The students came out of the school applauding because the whole school was watching the final moments of the competition on a large monitor, they carried our friends all in a beautiful procession while their hearts was thanking **Allah** for granting them this success, and during the celebration they took this image for them!

...Thanks to Allah Almighty...

Do you want to know how the friends found the location of the treasure in detail?! .. So read and fill in the blanks using the map:

By the grace of **Allah**, our friends succeeded in extracting the paper hidden under the inlay of the key box, which told them that they should start at the seven-sided garden fountain, following the geometric shapes on the map.

And when they were thinking of a way to benefit from these shapes, Ammar shouted: "I think I got it! .. Each shape has a number of angles, we must benefit from these numbers."

Abdullah replied: "The first shape has \_\_\_\_\_ corners and it is connected to the shape of the seven-sided fountain, so we have to start from the \_\_\_\_\_ corner of the fountain."

Indeed, the heroes set out from this corner and looked at the map, they found a star with \_\_\_\_\_ vertices, so they thought for a while before Ahmed shouted: "It is a deep star with \_\_\_\_\_ vertices... So I expect that we

have to walk fifty steps!"

So the young men tried Ahmed's idea, and Abdullah walked \_\_\_\_\_ steps evenly, and when he stood up, they found a mark on the tiles of the garden, they did not know how to continue, but here Saa'eed said: "Wait! .. There are \_\_\_\_\_ of the tiles here, which is the number we want, let us walk on the \_\_\_\_\_th stone to the end of the road!"

Indeed, our friends tried Saa'eed's idea, they walked along the \_\_\_\_\_th tiles until the end of the road, where they found themselves at a crossroads of three roads. Abdullah shouted:

"Here is the next shape with \_\_\_\_\_ vertices, so we will take the \_\_\_\_\_d path, we count from the path we stopped near; because we followed the \_\_\_\_\_th tiles that is near this path!"

So they stopped at the door of the \_\_\_\_\_d path that was open on grassy land and walked \_\_\_\_\_ steps where they found the sign of the shape of the treasure among the grass. They jumped with joy and thanked **Allah** a lot who granted them **cleverness, happiness and help!**
